

Statement Of Purpose For Ms In Computer Science With Work Experience Pdf

I am Nitish Singh, currently working as an IT Security Analyst with Infosys. I have been deeply interested in swimming, tennis, guitar, and singing since childhood. But one thing that has been a constant among my interests include a computer. Computers have inspired me to learn, improve, and develop my personality. I have acquired interests in languages used to run the computers. The one reason why I am choosing the University of Texas, Dallas is because of the reputation which comes along with the brand name, and the remarkable environment and curriculum that the university boasts of. To be a part of such a culture would be a dream come true.

I started with the C programming language during my school days. In high school, I learned about Java and Visual Basic. Initial days of undergraduate went into learning more and more about animations, design, and photoshop.

In the 4th year of my B.Tech, I worked with IBM as a Team Leader, where a number of associates worked under me for tech support. Next, I was also working with Akshaya Patra Foundation which serves food to the underprivileged school-going children. I thus have an inclination both towards my subject, and social issues.

As an IT Security Analyst with Infosys, I take care of various vulnerabilities in the system. The project has helped me understand the various aspects of cybersecurity, including a lot of manpower handling and maintenance of the online registry. Along with my professional and academic life, I have a social life too where I take care of my parents who are solely dependent on me for their livelihood. Most recently, I have helped my father in opening a shopping outlet where he handles two more working individuals.

The various research areas that I researched for the University of Texas, I associate myself with Data Security, Data Mining, and related subjects. I have understood from the University's website that there are a number of research labs and centers, specifically the Center for Cybersecurity Research and Research Lab on Advanced Network.

The ultimate goal of mine is to make a commendable and constructive career in the field and contribute my bit to the society. A dedicated study in Computer Science would help me gain a lot of experience, along with adding to my previous knowledge on the subject. Being a part of the University of Texas will be an achievement that would motivate me towards my career goal. I look forward to getting an opportunity for an MS in Computer Science from your university
